email:comconf@uni-nke.hu

The organizing committee provides an opportunity to publish the presentations given in the form of a co-report in the „Signal badge”, the scientific-professional publication of the Signal Department.

The aim of the event is to provide a scientific-professional forum for domestic and international specialists, researchers, university citizens and students to share experience, present research results, and build relationships.

The organizing committee is recommending the following topics as the main topics of the conference:

1. Short- and medium-term development guidelines of stationary and deployable infocommunication networks and digital systems of the Hungarian Defence Forces;
2. Current and future technologies, tools and organizational issues of infocommunication systems for possible battlefields and crisis management operations;
3. Milestones in the information / digital society;
4. Current issues of public infocommunication infrastructures;
5. Current issues in the field of cyberspace, cybersecurity, threats, challenges and the technological, technical and regulatory aspects of defence in the defence and civil spheres;
6. IoE, IoT, smart world;

7. Autonomous software, software robots, AI;
8. Common platform of security technology and infocommunication, technological-technical background, information security issues;
9. Present and future of the information security.

The organizers reserve the right to reject the presentations that do not fit the theme of the conference.

The language of the conference is Hungarian and English.
